

A- Sohar: Insurgents have crossed the Gulf of Oman and seized the port city of Sohar. Speed boats have dropped insurgent infantry on the beaches and ships have docked and started unloading ammo crates and vehicles. A 5-truck insurgency convoy patrols Sohar (includes AAA). Anti-air defenses are present but inactive. (This is Green zone. All spawns are either statics or have ROE set to Weapon's Hold)

B- Shipping Lane: Cargo ships loaded with insurgency weapons, ammo, vehicles, and food cross the Gulf of Oman in small convoys. Additional speed boats are crossing as well to reach the Sohar beaches. (This is Green zone. All spawns are either statics or have ROE set to Weapon's Hold)

C- Jask: The port city of Jask is the launch off point of the insurgency advance across the Gulf of Oman. These insurgents sure are really organized and seem to have freedom to roam through Iran and use its infrastructure pretty freely... Cargo ships are waiting to load additional vehicles, ammunition, and

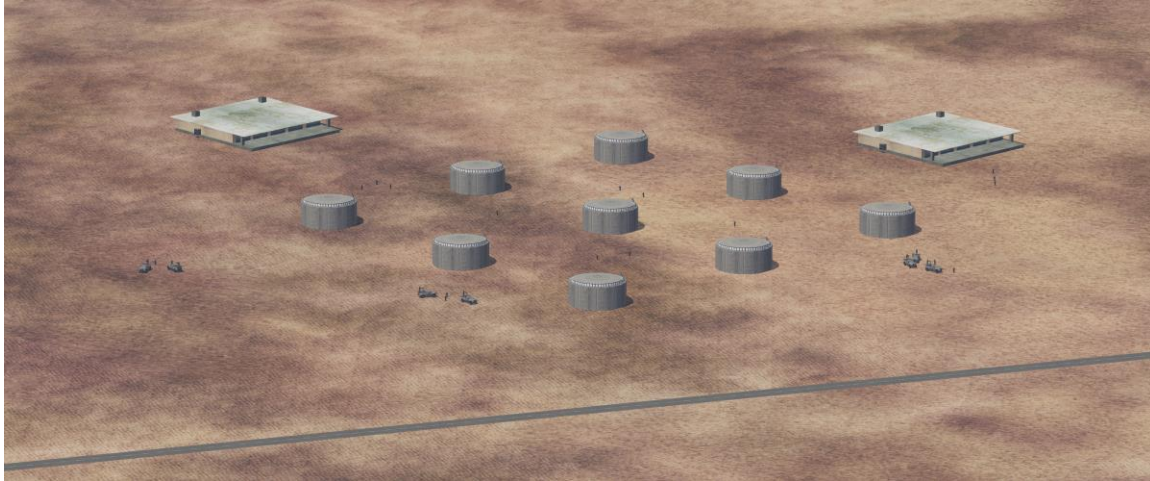

infantry. A 5-truck insurgency convoy patrols the city of Jask. (This is Yellow zone. Jask is outside of GCI and CAP engagement zones. You only need to worry about AAA,SAM, and small arms defenses)

D- Ammunition Factories: This industrial zone has been seized by insurgency forces for production of ammunition. A small 3-truck convoy currently patrols around the area (includes AAA). So strange that Iran just lets this place go so undefended! . (This is Yellow zone. It is outside of GCI and CAP engagement zones. You only need to worry about AAA,SAM, and small arms defenses)

E- Oil Storage: This oil depot has also been captured by insurgency forces. The tanks are currently ripe for the taking. Striking these tanks will cripple the insurgencies ability to wage war. . (This is Yellow zone. It is outside of GCI and CAP engagement zones. You only need to worry about AAA,SAM, and small arms defenses)

F- Insurgent Training Camp: This camp has been identified as an insurgency training facility. A large group of infantry and vehicles have congregated in the area. (This is Yellow zone. It is outside of GCI and CAP engagement zones. You only need to worry about AAA,SAM, and small arms defenses)

G- Road Block: Insurgents have taken over the highway leading into southern Iran along the coast. Really weird Iran doesn't seem to care... Insurgents have started "taxing" civilians passing through the area, and claiming anything they deem necessary to their cause. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage!)

H- TV Antenna East: Insurgent propoganda and recruiting broadcasts have been triangulated back to this antenna array in the region. Insurgent forces have setup camp outside of the station building and have taken over the station for their own purposes. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! SAM, AAA, and Small Arms defenses are all possible here as well.)

I- AAA Convoy: In a more overt action of support of the insurgency, a large convoy of 15 vehicles containing 3x Iranian AAA trucks has left the east side of Bandar Abbas. Intelligence reports they are heading for the port city of Jask along the major highway that follows the coast, and will be loaded up to be shipped across the Gulf of Oman to support the seizure of Sohar. (This convoy crossed between Red, Orange, and Yellow zones. Depending where you choose to engage will determine AI response. Remember, Red is in range of Iranian GCI response! ! SAM, AAA, and Small Arms defenses are all possible here as well.)

J- Oil Derricks: A small island containing Oil Derricks has been seized by insurgents on an island off the coast of south west Iran. Rumor has it part of this is an effort to keep the oil depot in the south east replenished to continue to fund the insurgency. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! ! SAM, AAA, and Small Arms defenses are all possible here as well.)

K- Insurgency Training Station: More sophisticated than the camp in the East, this former Iranian infantry training station has been "seized" by Insurgent forces and is being used to recruit and train new forces. A small 5-truck convoy patrols around the station. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! Take care! This site sites very close to Red Zone. If you egress East at all, there is a

good chance you will spawn GCI response! ! SAM, AAA, and Small Arms defenses are all possible here as well.)

L- Chemical Factories: Factories have been converted to start mass-producing chemicals that can be weaponized. New holding tanks have also popped up across the street from the renovated factories. Preventing insurgents from gaining the ability to wage chemical warfare is probably a good thing. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! Take care! This site sits very close to Red Zone. If you egress East at all, there is a good chance you will spawn GCI response! ! SAM, AAA, and Small Arms defenses are all possible here as well.)

M- The Three Towers: This collection of TV antennae have been broadcasting insurgent messages all over south-west Iran. Iran claims they have no part in this, however no insurgent forces can be seen in

or around these buildings. These towers need to be shut down to prevent the spread of insurgent propaganda. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! SAM, AAA, and Small Arms defenses are all possible here as well.)

N- High Value Target Compound: An insurgent leader is holding a meeting with his top lieutenants at a compound along the coastal highway parallel to the Gulf of Oman. (This is Orange zone. It is outside of GCI engagement zones, however it is within CAP engagement radius. If an Iranian CAP flight is within 45nm, they will engage! SAM, AAA, and Small Arms defenses are all possible here as well.)
